

# Simplify your renovation experience.

## *Increase accuracy and efficiency with 3D scanning.*

Complete your next interior project with unmatched accuracy. With the help of our 3D scanners, Elkay Interior Systems (EIS) seamlessly measures your space, ensuring precise field measurements. We are committed to providing a simplified experience to start your project off successfully.

### WHY 3D SCAN?

- Avoid rework or delays in the construction, manufacturing, and installation processes
- Faster and more convenient measuring process
- Increase the accuracy of field dimensioning down to 1/8-inch

### GET STARTED

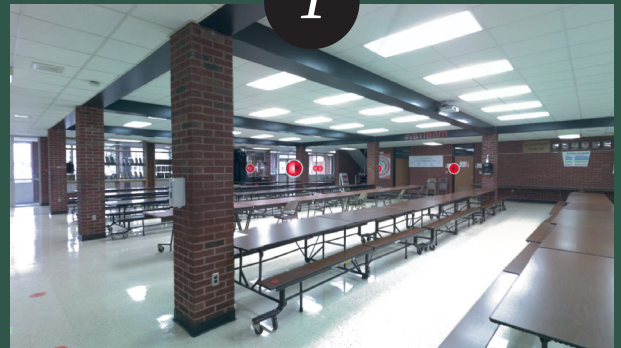

For more details or to start the scanning process for your business, get in touch with an **EIS sales representative**. We're here to help.

### HOW IT WORKS

1

The scanner digitally measures your interior in minutes using sonar technology. It will also pick up any outlets, light switches, graphics, columns, soffits, and bulkheads.

2

The scan is plotted into a point cloud, and a 3D image is created to scale. The point cloud acts as a virtual walk-through of your space and can be accessed by anyone – no need for special programs or software.

3

Our Design and CAD teams bring the 3D point cloud into our drafting programs to draw your space with new décor, furniture, or millwork elements. A rendered environment is created to show what your new interior will look like post-renovation.
